👤 SUMMARY

Computer Science student with strong foundation in Data Structures & Algorithms and hands-on experience in building scalable full-stack and AI-powered applications. Skilled in designing RESTful APIs, modular backend architectures, and integrating LLM-based systems. Familiar with system design fundamentals including REST API design, caching strategies, scalability concepts, and backend performance optimization. Actively learning Artificial Intelligence and applying it in real-world projects to build intelligent software solutions.

⚙️ TECHNICAL SKILLS

Languages:	Java, Python, JavaScript
Frontend:	React.js, HTML5, CSS3
Backend:	Node.js, Express.js, FastApi
Databases:	MongoDB, MySQL
Core CS:	Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks
AI & Tools:	LLM APIs (Gemini, Groq), Prompt Engineering, RAG Basics, Git, GitHub, REST APIs, JWT Authentication, Vercel (Basic Deployment & Hosting)
System Design:	API Design, Caching Strategies, Basic Scalability Concepts, Modular Architecture, Basic API Workflows

📁 PROJECTS

AI Resume Copilot | *React, Node.js, Express, MongoDB, LLM APIs, RAG, Vercel*

- Architected a modular full-stack AI platform for analyzing resumes against job descriptions and generating actionable insights.
- Designed RESTful APIs for resume parsing, AI prompt orchestration, and result generation workflows.
- Implemented Retrieval-Augmented Generation (RAG) pipeline to improve contextual accuracy of resume-job matching.
- Developed multi-model LLM routing layer with failover strategy for reliable AI responses.
- Engineered bulk job recommendation system generating 100+ job listings with CSV export functionality.
- Implemented in-memory caching with TTL eviction to prevent redundant AI processing for repeated requests.

NexusOps – AI-Native Revenue | *Node.js, REST APIs, JWT, RBAC, AI Workflows*

- Developed NexusOps – AI-Native Revenue & Customer Operations Platform
- Built a multi-tenant SaaS platform for revenue and customer operations with organization-level isolation, RBAC, authentication, CRM workflows and secure REST APIs.
- Designed an AI Action Gateway with tool validation, risk classification, approval workflows, action expiry, idempotency and audit trails for controlled AI-assisted operations.
- Implemented tenant-aware authorization, security middleware, request validation, rate limiting, health/readiness endpoints and structured operational logging.

🎓 EDUCATION

Bachelor of Technology in Computer Science and Engineering

2022 – 2026

GLA University, Mathura

🏆 CERTIFICATIONS

- Java Programming – Infosys Springboard
- Database Management System – NPTEL
- RESTful API Design & Development – Udemy

🏆 ACHIEVEMENTS

- Solved 150+ Data Structures & Algorithms problems on **LeetCode**
- Built full-stack and AI-integrated applications with real-world use cases.
